

# Cloxacillin Sodium PRODUCT DATA SHEET

issue date 12/10/2019

<b>Product Name:</b>	Cloxacillin Sodium
<b>Product Number:</b>	C038
<b>CAS Number:</b>	7081-44-9
<b>Molecular Formula:</b>	$C_{19}H_{17}ClN_3NaO_5S \cdot H_2O$
<b>Molecular Weight:</b>	475.88 g/mol
<b>Form:</b>	Powder
<b>Appearance:</b>	White or almost white powder
<b>Source:</b>	Bacillus polymyxa
<b>pH:</b>	4.0-7.0
<b>Storage Conditions:</b>	2-8 °C
<b>Description:</b>	Cloxacillin sodium is a narrow-spectrum $\beta$ -lactam antibiotic of the penicillin class. Cloxacillin sodium is sparingly soluble in aqueous solution (0.014 mg/mL).
<b>Mechanism of Action:</b>	$\beta$ -lactams interfere with PBP (penicillin binding protein) activity involved in the final phase of peptidoglycan synthesis. PBP's are enzymes which catalyze a pentaglycine crosslink between alanine and lysine residues providing additional strength to the cell wall. Without a pentaglycine crosslink, the integrity of the cell wall is severely compromised and ultimately leads to cell lysis and death. Resistance to $\beta$ -lactams is commonly due to cells containing plasmid encoded $\beta$ -lactamases. Unlike other members of the penicillin class, cloxacillin is resistant to $\beta$ -lactamases.
<b>Spectrum:</b>	Cloxacillin targets primarily gram positive bacteria, especially $\beta$ -lactamase producing <i>Staphylococci</i> .
<b>Microbiology Applications</b>	Cloxacillin is commonly used in clinical <i>in vitro</i> microbiological antimicrobial susceptibility tests (panels, discs, and MIC strips) against gram positive microbial isolates. Medical microbiologists use AST results to recommend antibiotic treatment options for infected patients. Representative MIC values include:  <i>Staphylococcus aureus</i> 0.2 $\mu$ g/mL – 3.13 $\mu$ g/mL  <ul style="list-style-type: none"><li>• For a complete list of cloxicillin MIC values, <a href="#">click here</a>.</li></ul>
