

<b>Product Name:</b>	Levofloxacin
<b>Product Number:</b>	L001
<b>CAS Number:</b>	138199-71-0
<b>Molecular Formula:</b>	$C_{18}H_{20}FN_3O_4 \cdot 0.5H_2O$
<b>Molecular Weight:</b>	370.38
<b>Form:</b>	Powder
<b>Appearance:</b>	Light yellow crystalline powder
<b>Solubility:</b>	Chloroform: Soluble Glacial acetic acid: Soluble Water: Insoluble
<b>Source:</b>	Synthetic
<b>Melting Point:</b>	218-227 °C
<b>Optical Rotation:</b>	-95° to -103°
<b>Storage Conditions:</b>	2-8°C
<b>Description:</b>	Levofloxacin is a broad-spectrum fluoroquinolone antibiotic, and the optical S-(-) isomer of Ofloxacin. It is a DNA gyrase inhibitor, and has been shown to inhibit topoisomerase IV. Levofloxacin is insoluble in aqueous solution.
<b>Mechanism of Action:</b>	Fluoroquinolone antibiotics target bacterial DNA gyrase (specifically type II topoisomerase) an enzyme which reduces DNA strain during replication. Because DNA gyrase is required during DNA replication, subsequent DNA synthesis and ultimately cell division is inhibited. It has also been shown to inhibit topoisomerase IV.
<b>Spectrum:</b>	Levofloxacin is a broad-spectrum antibiotic targeting most aerobic Gram-positive and Gram-negative bacteria. It is moderately active against anaerobes. It can also be used against <i>Mycoplasmas</i> . It is effective against pathogens causing pneumonia such as <i>Streptococcus pneumoniae</i> , and <i>Haemophilus influenzae</i> .
<b>Microbiology Applications</b>	Levofloxacin is commonly used in clinical <i>in vitro</i> microbiological antimicrobial susceptibility tests (panels, discs, and MIC strips) against Gram -positive and Gram-negative microbial isolates. Medical microbiologists use AST results to recommend antibiotic treatment options. Representative MIC values include: <ul style="list-style-type: none"><li>• <i>Haemophilus influenzae</i> 0.00625 µg/mL – 1 µg/mL</li><li>• <i>Streptococcus pneumoniae</i> 0.05 µg/mL - 4 µg/mL</li><li>• For a complete list of Levofloxacin MIC values, <a href="#">click here</a>.</li></ul>
