

# MycoRid™ PRODUCT DATA SHEET

issue date 12/11/2018

<b>Product Name:</b>	MycoRid™
<b>Product Number:</b>	M093
<b>Form:</b>	Liquid
<b>Appearance:</b>	Light Yellow Solution
<b>Source:</b>	Fermentation
<b>Storage Conditions:</b>	-20°C
<b>Description:</b>	MycoRid™ Solution (1000x) is a highly stable, solubilized aqueous solution of a polyene antifungal or antimycotic compound derived from the fermentation.
<b>Mechanism of Action:</b>	The active component of MycoRid™ Solution (1000x) has a similar mode of action to Amphotericin B (fungizone). Polyene antimicrobials associate with membrane sterols in mammalian and fungal cell membranes and forms pores leading to essential ion leakage and ultimately, cell death.
<b>Spectrum:</b>	MycoRid™ Solution (1000x) is active against fungal (molds and yeasts) cells and is not toxic to bacteria due to their lack of sterols. MycoRid™ is compatible with Pen-Strep solutions.
<b>Microbiology Applications</b>	MycoRid™ Solution (1000x) is used as an antimycotic selective agent in several routinely used selective media formulations to inhibit the growth of background fungal growth.
