Product Name: Nitrofurantoin
Product Number: N006
CAS Number: 67-20-9
Molecular Formula: \( \text{C}_8\text{H}_6\text{N}_4\text{O}_5 \)
Molecular Weight: 238.16
Form: Powder
Appearance: Yellow crystalline powder
Source: Synthetic
Water Content (Karl Fisher): < 1.0%
Storage Conditions: Store protected from light at ambient temperature.

Description: Nitrofurantoin is a unique bacteriostatic antibiotic. Nitrofurantoin is sparingly soluble in aqueous solution at 0.0795 mg/mL; however, it is highly soluble in DMF at 80 mg/mL.

Mechanism of Action: Upon entering a susceptible cell, nitrofurantoin is activated by bacterial enzymes and targets ribosomes and nucleic acids which inhibit bacterial growth.

Spectrum: Nitrofurantoin is a broad spectrum antibiotic frequently used to treat bacterial infections of the urinary tract. Nitrofurantoin has been found to be effective against certain \( \beta \)-lactam resistant strains of VRE or vancomycin resistant *Enterococcus*; a glycopeptide antibiotic resistant "superbug."

Microbiology Applications Nitrofurantoin is commonly used in clinical *in vitro* microbiological antimicrobial susceptibility tests (panels, discs, and MIC strips) against gram positive and gram negative microbial isolates. Medical microbiologists use AST results to recommend antibiotic treatment options for infected patients. Representative MIC values include:

- *Escherichia coli* 32 µg/mL - 64 µg/mL
- For a complete list of nitrofurantoin MIC values, click here.
