

# Hygromycin B, EvoPure<sup>®</sup> Solution (100 mg/ml) PRODUCT DATA SHEET

issue date 11/17/2017

<b>Product Name:</b>	Hygromycin B, EvoPure <sup>®</sup> Solution (100 mg/ml)
<b>Product Number:</b>	H015
<b>CAS Number:</b>	31282-04-9
<b>Molecular Formula:</b>	C <sub>20</sub> H <sub>37</sub> N <sub>3</sub> O <sub>13</sub>
<b>Molecular Weight:</b>	527.52 g/mol
<b>Form:</b>	Solution
<b>Solubility:</b>	Water: Freely Soluble
<b>Source:</b>	<i>Streptomyces Hygroscopicus</i>
<b>Melting Point:</b>	160-180 °C
<b>Storage Conditions:</b>	2-8 °C
<b>Description:</b>	<p>Hygromycin B, EvoPure<sup>®</sup> solution (100 mg/mL) is a solution containing high purity (&gt;99.0%) hygromycin B. Hygromycin B is a unique aminoglycoside antibiotic derived from <i>Streptomyces hygroscopicus</i> and is routinely used as a selective agent in cell culture or microbiology applications to isolate hygromycin B resistant cells after transfection or transformation, respectively.</p> <p>This product is considered a dangerous good. Quantities above 1 g may be subject to additional shipping fees. Please contact us for specific questions.</p> <p>For more hygromycin B products, <a href="#">click here</a>.</p> <p>For more information on hygromycin B, EvoPure<sup>®</sup>, <a href="#">click here</a>.</p>
<b>Mechanism of Action:</b>	Hygromycin B inhibits protein synthesis by strengthening the interaction of tRNA binding in the ribosomal A-site. Hygromycin B also prevents mRNA and tRNA translocation by an unknown mechanism. These are unique mechanisms for an aminoglycoside antibiotic and they differ from the mode of action neomycin, gentamicin, and G418.
<b>Spectrum:</b>	Hygromycin B is effective against eukaryotic and prokaryotic cells.
<b>Microbiology Applications</b>	Hygromycin B can be used as a selection agent to isolate hygromycin b resistant bacteria and fungi.
<b>Technical Data:</b>	HPLC, NMR, FTIR, and MS analysis may be available. For more info, please email <a href="mailto:info@toku-e.com">info@toku-e.com</a> .
