

Penicillin-Streptomycin Solution (100X) PRODUCT DATA SHEET

issue date 02/17/2019

Product Name:	Penicillin-Streptomycin Solution (100X)
Product Number:	P030
Form:	Solution
Appearance:	Clear solution
Water Content (Karl Fischer):	6.0-6.7
Storage Conditions:	-20 °C
Description:	Pencillin-Streptomycin (Pen/Strep) is an antibacterial solution comprised of penicillin (10,000 units/mL), a beta-lactam, and streptomycin (10,000 ug/mL), an aminoglycoside in 0.9% NaCl.

Dr. Chung et al. used penicillin-streptomycin from TOKU-E in their RPMI 1640 medium to culture HT-29 colon cancer cells. Read more here: "[Rab11 collaborates E-cadherin to promote collective cell migration and indicates a poor prognosis in colorectal carcinoma](#)"

Mechanism of Action:	Penicillin, the beta lactam, breaks peptidoglycan links in non-resistant cell walls and triggers autolysins which kill the cell. Streptomycin, the aminoglycoside, binds to the ribosomes and inhibits protein synthesis.
Spectrum:	Penicillin-streptomycin solution targets the cell wall of both Gram-positive and Gram-negative bacteria.
